

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

1. Introduction

Purpose:

This system connects college students with nearby part-time job opportunities in real-time.

Scope:

- Help students find nearby jobs using maps
- Allow businesses to post short-term gigs
- Enable quick hiring and payments

Definitions:

Gig: Short-term job (2–4 hours)

Employer: Business posting jobs

Student: User seeking jobs

2. Overall Description

Product Perspective:

Mobile/web-based platform integrating location services, authentication, and job posting.

User Classes:

- Students
- Employers
- Admin

Operating Environment:

Android / Web Browser

Backend: Node.js / PHP

Database: MySQL

3. Functional Requirements

Student Features:

- Register/Login
- View jobs on map
- Filter jobs

- Apply instantly
- Track job status
- Ratings & reviews

Employer Features:

- Register/Login
- Post jobs
- View applicants
- Accept/reject candidates
- Mark job completed
- Rate students

Admin Features:

- Manage users
- Verify accounts
- Monitor jobs
- Handle complaints

4. Non-Functional Requirements

- Performance: <2 seconds load time
- Security: Encrypted data
- Usability: Simple UI
- Scalability: Multiple colleges
- Accuracy: Real-time tracking

5. Database Requirements

Tables:

Users, Jobs, Applications, Ratings, Payments

6. External Interfaces

- Google Maps API
- Payment Gateway (UPI / Razorpay)
- Notification System
